

Mybatis查询返回Map

二、返回 Map

1.一条记录

```
public Map<String,Object> selectMyUserById(Integer id);
```

```
<select id="selectMyUserById" resultType="map" parameterType="integer">
  select * from myuser where id = #{id}
</select>
```

```
<--      total: 1
{name=zhangsan, id=16, age=768}
Resetting autocommit to true on JDBC
```

2.多条记录，需要指定 Map 的 Key 和 Value 的类型

```
// 指定 Map 的 Key 从记录中的 id 列获取
@MapKey("id")
public Map<String,MyUser> selectMyUserById(Integer id);
```

```
<!-- resultType Map 中 value 的类型 -->
<select id="selectMyUserById" resultType="myUser" parameterType="integer">
  select * from myuser where id > #{id}
</select>
```

```
<--      total: 9
{17=MyUser{id=17, name='dfg', age=768}, 18=MyUser{id=18, name='zhangsan', age=12}, 19=MyUser{id=
Resetting autocommit to true on JDBC Connection [com.mysql.jdbc.ConnectionImpl@2805c96b]
```
