Dubbo服务查看
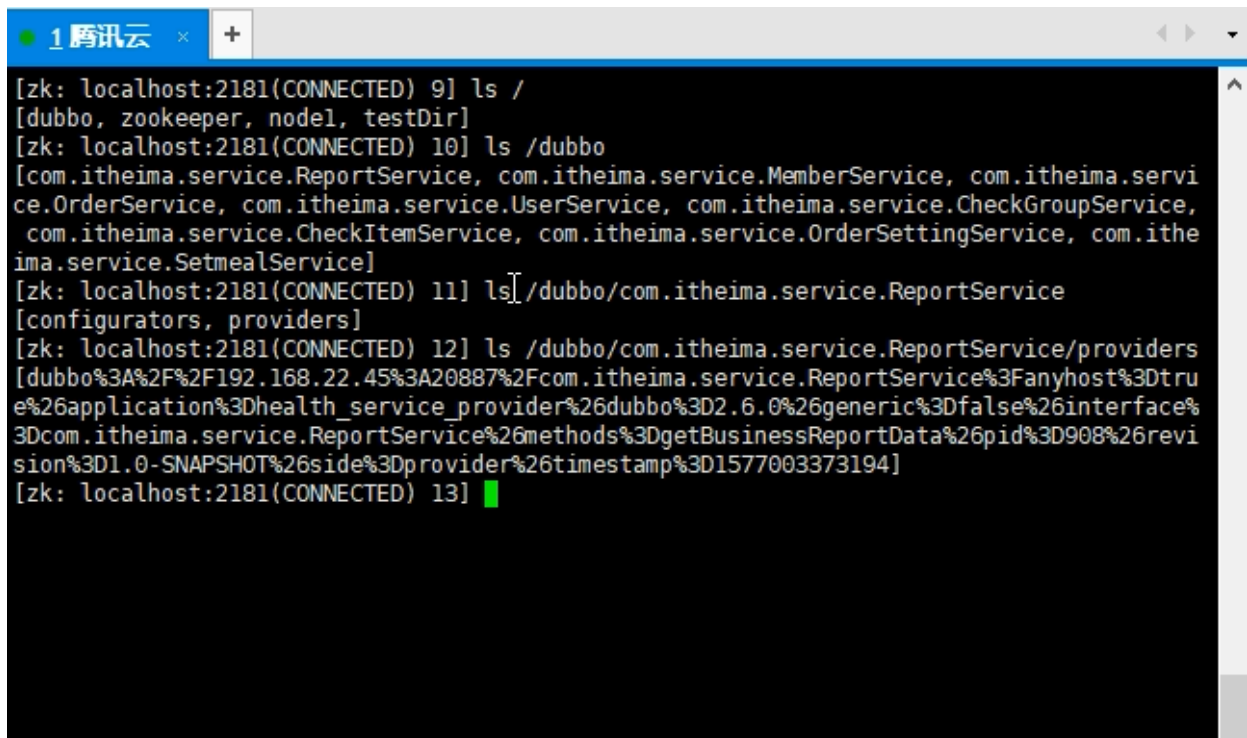

启动dubbo客户端：在zookeeper安装目录的bin文件中

如果是Linux则运行：./zkCli.sh

如果是Windows则运行：zkCli.cmd

接着可以通过下面的命令来查看服务状态：

```
zookeeper：连不上
        zookeeper contected is not yet
        zookeeper 根本就没启动
              ./zkServer.sh status
        ip和端口不对
        防火墙
        阿里云的服务器还需要额外开发2181端口
dubbo服务不可用
    1. 登上你的zk，然后执行 ls / 看是否有dubbo目录
    2. 停止你所有的java服务
    3. 删除zk里面的dubbo目录
            rmr /dubbo
            ls /
    4. 只启动你的内容提供者
        ls /dubbo
               com.itcast.user.UserService
        ls /dubbo/com.itcast.user.UserService/provider:
```

```
[zk: localhost:2181(CONNECTED) 9] ls /
[dubbo, zookeeper, node1, testDir]
[zk: localhost:2181(CONNECTED) 10] ls /dubbo
[com.itheima.service.ReportService, com.itheima.service.MemberService, com.itheima.servi
ce.OrderService, com.itheima.service.UserService, com.itheima.service.CheckGroupService,
 com.itheima.service.CheckItemService, com.itheima.service.OrderSettingService, com.ithe
ima.service.SetmealService]
[zk: localhost:2181(CONNECTED) 11] ls /dubbo/com.itheima.service.ReportService
[configurators, providers]
[zk: localhost:2181(CONNECTED) 12] ls /dubbo/com.itheima.service.ReportService/providers
[dubbo%3A%2F%2F192.168.22.45%3A20887%2Fcom.itheima.service.ReportService%3Fanyhost%3Dtru
e%26application%3Dhealth_service_provider%26dubbo%3D2.6.0%26generic%3Dfalse%26interface%
3Dcom.itheima.service.ReportService%26methods%3DgetBusinessReportData%26pid%3D908%26revi
sion%3D1.0-SNAPSHOT%26side%3Dprovider%26timestamp%3D1577003373194]
[zk: localhost:2181(CONNECTED) 13]
```

启动dubbo客户端：在zookeeper安装目录的bin文件中

如果是Linux则运行：./zkCli.sh

如果是Windows则运行：zkCli.cmd
